

Date: 2015-04-23

Facilitator: Erik Karlkvist

Participants: Emil Axelsson, Erik Karlkvist, Rebecka Reitmaier, Hampus Rönström

### **1. Objectives (5 min). Resolve any issues preventing the team to continue.**

Rebecka and Erik have a lot to do outside school, therefore they're not very productive. Emil and Hampus can work as usual, but the pace is slower. But after this week it will be as before.

RAD:s misses some parts. Use Cases and analysmodellen.

### **2. Reports (15 min) from previous meeting**

We have finished every part of the RAD, together. We have presented the analysis model, with mostly positive feedback. In the analysis model we were missing a class that should be "over" terrain, stars and obstacles. We have since the last meeting finished a first iteration of a runnable program with the most important use case, move, implemented.

### **3. Discussion items (35 min)**

We need to rewrite our code a little so the code better follows the MVC-model. Add analysis model and Use Cases, after they are slightly rewritten, to the RAD. For example, in the analysis model we have written that the terrain has a world, which is wrong.

### **4. Outcomes and assignments (5 min)**

Erik, Rebecka and Hampus will sit down on Sunday to rework the analysis model and UC. Emil will probably not do much since he will be busy.

### **5. Wrap up**

For next meeting we will have to discuss how we will solve the MVC problem.

Next meeting will be on Monday 27/4-15 8:00.
